

Coding test

Angular/Typescript/Sass/Bootstrap

Exercise:

This coding exercise consists in implementing a single frontend project with the Giphy public API.

- Create an angular project with the latest version.
- Install Bootstrap.
- Use Sass
- Add a pre request code cleaning
- Create a simple project with a page listing a result of images from the Giphy API.
- This page must contain: a multi-tag search engine, the result of searching for 3 x 3 images, a pagination.
- Add a layer of unit test and end to end.
